

# VGA2WEB Lite

VGA2WEB Lite is Epiphan's compact version of the popular VGA2WEB web presentation solution. VGA2WEB Lite allows you to broadcast the video from virtually any VGA source, including VGA projectors, computers, medical devices and electronic microscopes.

VGA2WEB Lite is a one-of-a-kind portable and lightweight broadcasting and presentation solution. Simply connect its input to the source VGA signal and, as long as the VGA2WEB has access to the Internet via its Gigabit Ethernet interface, you're ready to start sharing your VGA stream with viewers around the world.

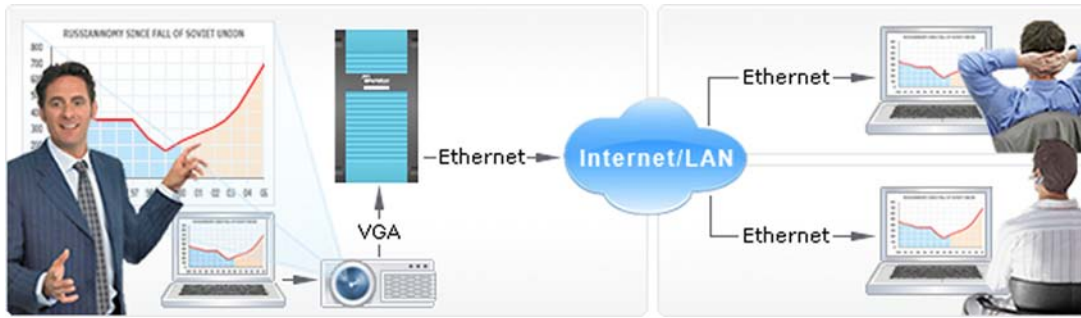

With VGA2WEB Lite, there is no software to download or complicated interface to learn. Viewers access the live broadcast via their web browser, which means that this solution works flawlessly with Windows, Mac OS, Linux, and any other operating system with a modern web browser. Just provide your viewers with the web address and password to your presentation.

## VGA2WEB Lite Connection Diagram

Tailored specifically for trainers, conferences, sales staff and distance education providers, VGA2WEB lite offers the following features:

- **Secure** – No additional software needs to be installed on the source device or on the viewers' computers. The web stream can also be encrypted on-the-fly.
- **Simple** – Just plug it in and present. There is no software to learn and no prior set-up is required. As long as the VGA2WEB Lite has access to the Internet you're ready to present.
- **Low-Cost** – There are no setup or usage fees and up to 25 participants can view your broadcast at any given time.
- **Versatile** – VGA2WEB Lite works with any device with a VGA output and its webcasts can be viewed by anyone with a web browser. What's more, the VGA2WEB Lite is small, lightweight, and portable, meaning that it can easily be transferred between different locations.

VGA2WEB Lite can also be integrated into your custom web infrastructure. Contact us for custom integration details.
